How to use HTML color names

Just like Hex color codes, HTML color names can be used with inline HTML styles or in a separate CSS stylesheet.

HTML

```
<!-- In your HTML document -->
<body>
  <h1 style="color:IndianRed">Indian Red Title Text</h1>
  <p style="color:SlateGray">Slate gray paragraph text</p>
</body>
```

CSS

```
/* In your .css stylesheet */
h1 { color: IndianRed; }
p { color: SlateGray; }
```

- ☐ Custom

Color harmony
The color rules ensure a harmonic balance of colors based on the color you have set as Base Color.

Color wheel (or image in Extract Theme tab) can be used to generate color palette, which can be saved into Creative Cloud, after signing in.

You can then use your saved color themes, in Adobe products (Photoshop, Illustrator, Fresco etc.), via Adobe Color theme panel or CC Libraries.

Psychology

- **Orange** is energetic and warm. Some common associations with orange include creativity, enthusiasm, lightheartedness, and affordability.
- **Red** is the color of blood, so it's often associated with energy, war, danger, and power but also passion, desire, and love. Some common associations with red include action, adventure, aggression, and excitement.
- **Yellow** evokes positivity, youth, joy, playfulness, sunshine, and warmth.
- **Pink** evokes feelings of innocence and delicateness, gratitude, romance, softness, and appreciation.
- **Blue** is perceived as authoritative, dependable, and trustworthy. Common associations with blue include calmness, serenity, confidence, dignity, and security.
- **Green** is the color of nature. It symbolizes growth, freshness, serenity, money, health, and healing.
- **Black** represents power, elegance, and authority. Common associations with black also include class, distinction, formality, mystery, secrecy, and seriousness.
